This MSS Standard Practice was originally developed under the consensus of the MSS Technical Committee 114 (Steel Valves) and the MSS Coordinating Committee. In 2012, responsibility for this Standard Practice, and the current revision, was transferred to the new MSS Technical Committee 409 (Knife Gate Valves); with the MSS Coordinating Committee continuing to provide final review and approval. Future development and maintenance of this Standard Practice will be conducted by the new MSS Technical Committee 409. In addition, this Standard Practice was approved by an ANSI/MSS Consensus Committee and ANSI as an American National Standard. The content of this Standard Practice is the resulting efforts of competent and experienced volunteers to provide an effective, clear, and non-exclusive standard that will benefit the industry as a whole. This MSS Standard Practice describes minimal requirements and is intended as a basis for common practice by the manufacturer, the user, and the general public. The existence of an MSS Standard Practice does not in itself preclude the manufacture, sale, or use of products not conforming to the Standard Practice. Mandatory conformance to this Standard Practice is established only by reference in other documents such as a code, specification, sales contract, or public law, as applicable. MSS has no power, nor does it undertake to enforce or certify compliance with this document. Any certification or other statement of compliance with the requirements of this Standard Practice shall not be attributable to MSS and is solely the responsibility of the certifier or maker of the statement.

"Unless indicated otherwise within this MSS Standard Practice, other standards documents referenced to herein are identified by the date of issue that was applicable to this Standard Practice at the date of approval of this MSS Standard Practice (see Annex A). This Standard Practice shall remain silent on the validity of those other standards of prior or subsequent dates of issue even though applicable provisions may not have changed."

By publication of this Standard Practice, no position is taken with respect to the validity of any potential claim(s) or of any patent rights in connection therewith. MSS shall not be held responsible for identifying any patent rights. Users are expressly advised that determination of patent rights and the risk of infringement of such rights are entirely their responsibility.

In this Standard Practice, all text, notes, annexes, tables, figures, and references are construed to be essential to the understanding of the message of the standard, and are considered normative unless indicated as “supplemental”. All appendices, if included, that appear in this document are construed as “supplemental”. Note that supplemental information does not include mandatory requirements.

The SI (metric) units and U.S. customary units in this Standard Practice are regarded separately as the standard; each should be used independently of the other. Combining or converting values between the two systems may result in non-conformance with this Standard Practice.

This Standard Practice has been substantially revised from the previous 2010 edition. It is suggested that if the user is interested in knowing what changes have been made, that direct page by page comparison should be made of this document and that of the previous edition.

Non-toleranced dimensions in this Standard Practice are nominal unless otherwise specified.

Excerpts of this Standard Practice may be quoted with permission. FOREWORD

This MSS Standard Practice, SP-135, is widely used in multiple valve and piping industries and is aligned with the Class-rated design, testing and material requirements of ASME B16.34, and the Class rated pressure, temperature, and dimensional requirements of ASME B16.5 and B16.47. MSS SP-135 is the principal ASME Class rated knife gate valve standard and it is widely accepted as the principal Knife Gate Valve standard for industry users that include: paper, chemical, petro-chemical, hydroelectric power, and fossil fuel power valve and fittings systems.

MSS Standard Practice SP-135 was originally published in 2006 as SP-135-2006, *High Pressure Steel Knife Gate Valves* for the purpose of providing an industry need for a knife gate valve standard that involved high pressure and a Class rated design.

The revised 2010 edition of SP-135 revised the title slightly and expanded the valve NPS (DN) coverage; including two (2) sets of Face-to-Face dimensions (Short and Long Pattern). The original one (1) set of Face-to-Face dimensions included in the introductory 2006 edition of SP-135 was retained and rearranged in the tables of the revised 2010 edition of SP-135 as follows:

**CLASS 150:**
- NPS ≤ 24 (DN ≤ 600) Long Pattern
- NPS > 24 (DN > 600) Short Pattern

**CLASS 300:**
- All NPS (All DN) Long Pattern

This 2016 edition of MSS SP-135, in addition to various editorial and formatting updates, includes: (1) revisions to tables and numbering; (2) an additional Section 5.2.2 marking option; (3) inclusion of NPS 2 – 36 (DN 50 – 900) Class 600 valve dimensions in revised scope, body text, and new Tables 3/3M; (4) editorial clarification of several table headings and notes; and (5) updating of the organizations and references in Annex A. This edition was also approved by an ANSI/MSS Consensus Committee and ANSI as an American National Standard.

About MSS
The Manufacturers Standardization Society (MSS) of the Valve and Fittings Industry is a non-profit technical association organized for development and improvement of industry, national and international codes and standards for Valves, Valve Actuators, Valve Modifications, Pipe Fittings, Flanges, Pipe Hangers and Supports, and Associated Seals. Since its establishment in 1924, MSS has been dedicated to developing standards for national and global applications, in cooperation with other standardizing bodies and regulatory authorities.
